EDUCATION

University of Toronto Scarborough

Honors Bachelor of Science in Computer Science; Dean's List Scholar '25

Scarborough, ON

Sept 2024 – Present

EXPERIENCE

Software Developer Intern

June 2023 – Aug 2023

AgroInnova Ltd

Accra, Ghana

- Built responsive web pages with HTML and CSS, improving consistency across desktop and mobile devices
- Worked with developers to identify and fix frontend bugs affecting usability and page behavior
- Optimized interfaces for mobile access, improving usability for farmers and vendors using the platform remotely
- Participated in Agile sprint cycles, including standups, task planning, and progress updates with the development team

PROJECTS

SeniCare | *React, JavaScript, FastAPI, MongoDB, Tailwind CSS, MediaPipe, OpenCV*

Feb 2026

Hackathon Winner (Best Use of Gemini API, CTRL+HACK+DEL 2.0)

- Built an AI-assisted remote monitoring web app for clinics to track seniors living alone through structured daily check-ins
- Integrated Gemini Live API to support real-time conversational check-ins and structured health response capture
- Implemented a video-processing pipeline using MediaPipe Face Mesh and video-based signals to extract facial landmarks and estimate basic health indicators
- Developed FastAPI backend endpoints for submission validation and clinician triage summary generation

JobFolio | *React, Next.js, TypeScript, Tailwind CSS, Node.js, Express.js, MongoDB, Jest, Git,*

Dec 2025

Docker

- Built and dockerized a full-stack job application tracker using React, Next.js, TypeScript, Tailwind CSS, Node.js, Express.js, and MongoDB
- Designed resume versioning and comparison workflows to help users track application-specific resume changes across job submissions.
- Created an analytics dashboard showing interview rate, offer rate, pending applications, and total submissions
- Implemented JWT-based authentication and password hashing with bcrypt
- Containerized the backend with Docker to standardize local development, simplify environment setup, and improve deployment readiness

EcoHome Studio | *Next.js, TypeScript, TailwindCSS, LangChain, Supabase pgvector,*

May 2026

Featherless.ai, React Three Fiber, Three.js

- Built an AI-powered sustainable home design platform that converts user prompts into structured home design JSON, enabling dynamic rendering of interactive 3D home concepts, 2D floor plans, sustainability scores, and upgrade recommendations.
- Implemented a LangChain-based RAG pipeline with recursive document chunking, vector embeddings, and similarity retrieval over sustainability and green-building datasets to ground AI-generated housing recommendations.
- Built a Supabase pgvector retrieval layer indexing **200+** semantic document chunks with metadata-filtered search for climate-specific sustainability guidance and low-latency contextual retrieval.
- Developed interactive 3D home visualization components with React Three Fiber and Three.js, rendering room layouts and sustainability features from structured AI-generated schemas.

TECHNICAL SKILLS

Languages: Java, Python, TypeScript, JavaScript, C, HTML/CSS

Frontend: React, Next.js, TailwindCSS

Backend: Node.js, Next.js, Express.js, FastAPI

AI/Infra: LangChain, Supabase pgvector, Firebase, Docker

Databases: MongoDB, Firestore, PostgreSQL

Tools: Git, JUnit, Jest, Mockito, Vercel, Render, Jira

Methodologies: Agile
